CASE STUDY PROBLEM STATEMENT

Title: - The Limit

Problem Statement:

- Procrastination is a common problem that can affect people of all ages and backgrounds.
- People could use normal calendar apps for the reminders but couldn't be more effective with progress made.
- Tracking the work is more hectic with traditional apps.

A task management application that allows users to create and track tasks, set reminders, and collaborate with others.

Abstract:

A task management application is a software tool designed to help individuals and teams manage their tasks, projects, and workflows. The application provides a central platform for creating, organizing, and tracking tasks, and allows users to assign and delegate responsibilities, set deadlines, and monitor progress. The application is often equipped with features such as calendars, to-do lists, notifications, and progress charts, to help users stay on top of their tasks and manage their workloads effectively. It can be used for both personal and professional purposes, and is beneficial for increasing productivity, reducing confusion and errors, and improving team collaboration.

Solution:

We decided to develop a reminder Web Based application called **The Limit**

The solution to the problem statement of "A task management application that allows users to create and track tasks, set reminders, and collaborate with others" would be to develop a web-based or mobile application that has the following features:

Task creation: Users can easily create tasks with detailed descriptions and set due dates.

Task tracking: Users can track the progress of tasks and view the status of tasks assigned to them or others.

Reminders: Users can set reminders for tasks to ensure they stay on track and meet deadlines.

Collaboration: Users can share tasks and collaborate with others in real-time, allowing for seamless communication and teamwork.

Customization: Users can customize the interface and settings to fit their personal preferences and workflow.

Accessibility: The application should be accessible from any device, allowing users to manage their tasks from anywhere.

Integrations: Integrating the application with other productivity tools like calendar, email, messaging apps will make it more convenient for the users.

Reporting and Analytics: Users should be able to generate reports and see analytics of their progress, or their team's progress.

Overall, the application should be designed to simplify the task management process and increase productivity and accountability within teams and individuals.

Technologies which have been used:

Web Technologies:

1.Frontend:

1.1 Html, Css

1.2 JavaScript

1.3 Java Script Frame Works (React), Jquery

2.Database:

2.1 Mysql

2.2 Php

2.3 MongoDB

3.Backend:

3.1 Django

3.2 Nodejs
